

Experiential Learning in HKU Science

Our lab leader (Rajan) is serving as Assistant Dean for experiential learning at faculty of science. Experiential Learning is a process of teaching and learning using outside class room experience.

We would like to emphasis THREE key points:

1. Our philosophy is that science students can develop innovative and impactful novel ideas and improve their critical thinking skills through experiential learning.
2. Therefore, we have developed variety of EL tools that suite students with different background and ideas – for example, we have research based LE activities, job oriented internships in industry and overseas field trips , and finally,
3. We are providing funding from multiple sources to students to join at least one of our EL activities and we are committed to send all of you outside HK for EL before 2022.

Looking forward to see many of you enjoying our Experiential Learning opportunities in Science Faculty.

**Experiential Learning (EL)
Opportunities at HKU Science**
